Even could be worse... if the repository code is the developer
computer

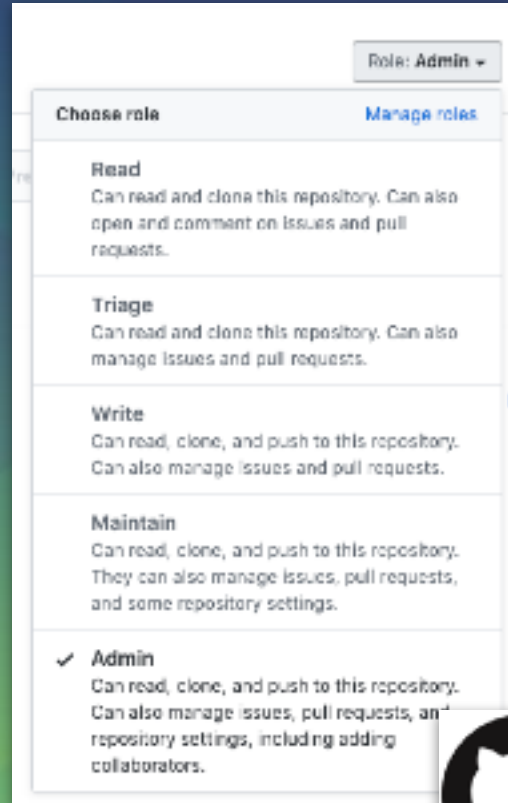

The **BAD ROLE** Granularity!

- There is not a way to set fine grained permissions at common source control versions system.
- Can't set up permissions for specific files or directories.

Even could be worse... if the repository code is the developer computer

The **DEV Machine** as only source code server!

- There is a cowboy coder in your team?
- You have very tiny software in production only managed by one developer?
- You have a guru developer?
- You have the correct security at the workplace?
- Are your developers BYOD?
