

Memory BOMB (5 / 5)

- Less Known but more effective in Docker.
- Today powerful computers can die very fast with no clue who pipeline is responsible.
- You can lost all your agents before you find where the problem is.

Fork BOMB! (1 / 2)

- Fork bomb is type of attack that aims exhaust a system by creating new processes recursively
- It very difficult to detect if you don't have a very good log system configured
- Run in a Pipeline is so easy
- In multi-agent system the results are the same that with Memory Bomb
