

Keep the code safe at Source Code servers. Do backups.  
Keep the workplace safe.

The DEV Machine has only one dedicated server!

# The **DEV Machine** as only source code server!

- There is a cowboy coder in your team?
- You have very tiny software in production only managed by one developer?
- You have a guru developer?
- You have the correct security at the workplace?
- Are your developers BYOD?

Keep the code safe at Source Code servers. Do backups.  
Keep the workplace safe.

# In **STACK OVERFLOW** Works Great!

No all *StackOverflow*  
people are good persons  
(or even humans)
