Misconfigured Docker registries could leak confidential data, lead to a full-scale compromise and interrupt the business operations."

A slew of misconfigured Docker container registries has inadvertently exposed source code for 15,887 unique versions of applications owned by research institutes, retailers, news media organizations and technology companies.

- You have your own container registry?
- Do you check your Dockerfiles?
- Your pipelines has permissions and access to publish in docker hub?

Allow only some agents to publish images. Check docker layers contents. Check Dockerfile.

Keep **API** Safe!

- Do you use the API?
- Do you control the CI/CD network access?
