Memory BOMB (1 / 5)

- Memory bomb is type of attack that aims to fill all system memory.

- Not only RAM also SWAP is affected.

- If you don't have limits in your host it can consume all of your HD space as a SWAP space.

Memory BOMB (2 / 5)

- What if you can run a memory bomb in a C.I. / C.D. system?

- What if the C.I. is deployed as multi-agent?
