Keep the code safe at Source Code servers. Do backups.
Keep the workplace safe.

There is a cowboy coder in your team?
You have very tiny software in production only managed by one developer?
You a have a guru developer?
You have the correct security at the workplace?
Are your developers BYOD?

The **DEV Machine** as only source code server!

The DEV Machine as only source code server!

- There is a cowboy coder in your team?
- You have very tiny software in production only managed by one developer?
- You a have a guru developer?
